EMF's linked to childhood diseases

Residents in E. Hanover have testified to the BPU that EMF's are causing cancer clusters in their area... EMF's have also been linked to higher incidences of childhood leukemia and other diseases.

PSE&G POWER LINE ALERT!

PSE&G wants to take down existing towers and replace them with towers more than TWICE the height of the current towers, double the existing line, and add a 500KV line that would bring HUGE amounts of energy through our area. Instead of 3 wires, there would be 18 wires !! This project is unnecessary, and must be stopped!

Stop the Lines has intervened in the process, and has an attorney building a case to challenge this project, along with several other intervenors. This project can be stopped, but we need your support. Please sign up for e-mail updates, visit our website, and send in comments to the BPU. This is a crucial time, and it is all of our responsibilities to save our communities.

THIS PROJECT WILL AFFECT THE FOLLOWING:

YOUR VIEWS	YOUR WATER	DRILLING	PROPERTY VALUES	ACCESS ROADS
 <p>Is this what YOUR HOUSE will look like?</p>	<p>Deep drilling for foundations would require use of industrial lubricants made from polluting toxins</p>	<p>Deep drilling needed for these towers... Drilling and blasting would go on for years, foundation depths would be ~40 feet deep!</p>	<p>Realtors say that houses can't be sold currently with this project pending - what if it goes through?!</p>	<p>Wide roads will be carved through our landscaped lawns, pastoral fields and beautiful forests. And what about the erosion and run off?</p>
